Bioconductor
OPEN SOURCE SOFTWARE FOR BIOINFORMATICS

Challenge: The SummarizedExperiment (SE) framework is widely used in Bioconductor and offers significant advantages across various fields. However, microbiome data science has relied on alternative approaches, limiting its integration with these advanced tools.

Solution: miaverse (MIcrobiome Analysis uniVERSE) introduces the TreeSummarizedExperiment (TreeSE), an extension of SE tailored for microbiome data. This collaborative, open-source project offers both tools and an extensive online book to advance and support microbiome data science.

Benefits: By aligning microbiome data science with the established SE framework, miaverse enhances interoperability, reduces duplication, and supports sustainable development in the field.

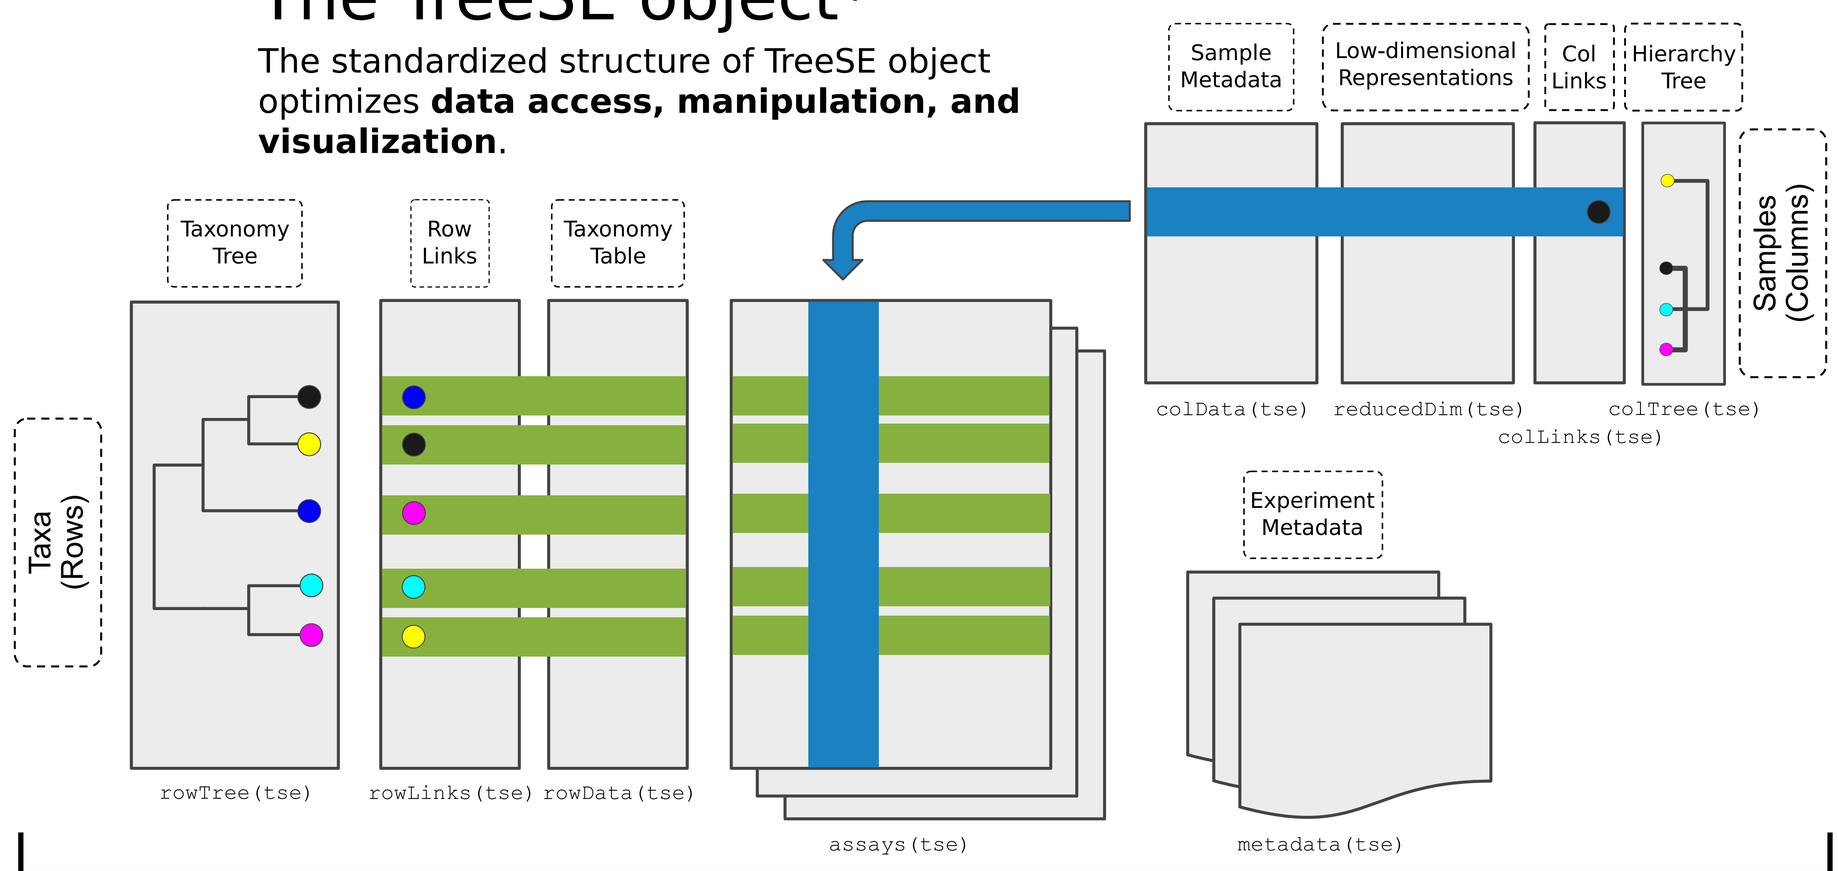
Check **Orchestrating Microbiome Analysis (OMA) online book** for more examples and information.

WORKFLOW: TreeSE & miaverse

Import

The TreeSE object*

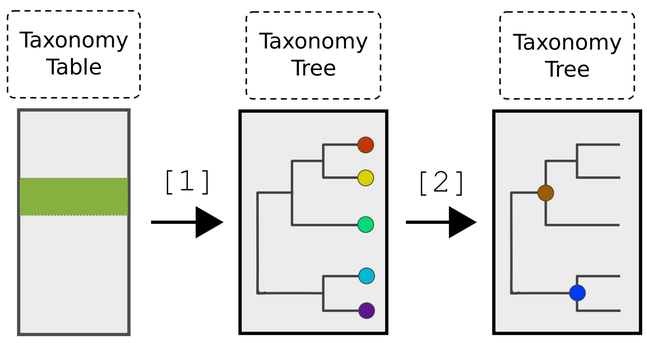
The standardized structure of TreeSE object optimizes **data access, manipulation, and visualization**.



* Huang R, Soneson C, Ernst FGM et al. TreeSummarizedExperiment: a S4 class for data with hierarchical structure [version 2; peer review: 3 approved]. F1000Research 2021, 9:1246

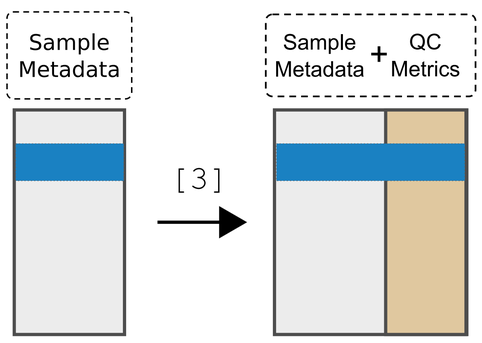
Microbiome data science workflow

Data Wrangling



```
[1] mia::addHierarchyTree(tse)
[2] TreeSE::aggValue(tse)
```

Quality Control



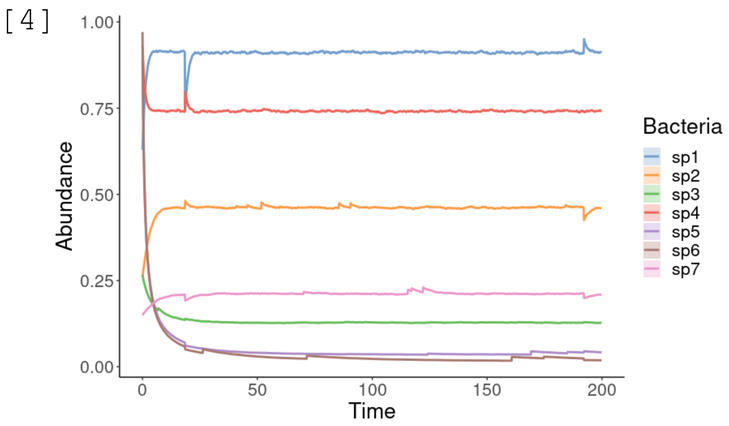
```
[3] scater::addPerCellQC(tse)
```

Analysis

Wide range of methods, including:

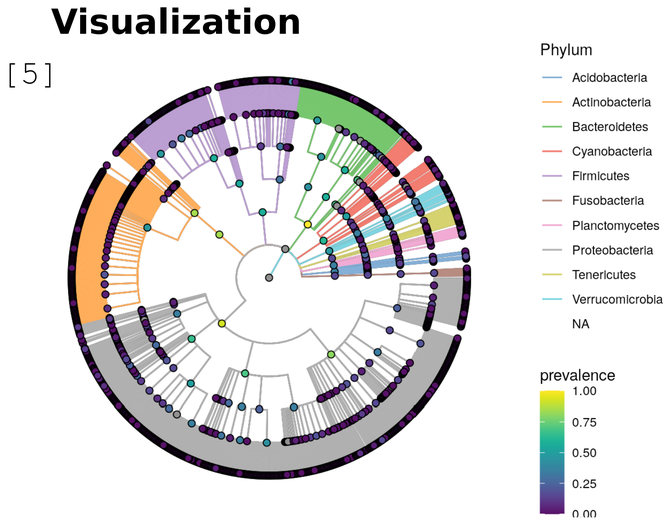
- Agglomeration
- Transformation
- Alpha and beta diversity
- Clustering and ordination
- Differential abundance
- Networks and machine learning
- ...

Simulation



```
[4] miaSim::simulateGLV(x)
[4] miaViz::plotSeries(tse)
```

Visualization



```
[5] miaViz::plotRowTree(tse)
```

Expanding ecosystem

The package ecosystem is supported by many independent developers. Expand this list by supporting (Tree)SE in your R package.
